This collection of information is required by 37 CFR 1.133. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 21 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Docket No. 50325-0604

## IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re application of:

Group Art Unit No.: 2665

Clemm, et al.

Examiner: Yang, Lina

Serial No.: 10/027,005

Confirmation No.: 1136

Filed on: December 19, 2001

For: MANAGING PACKET VOICE NETWORKS  
USING A VIRTUAL SWITCH APPROACHCommissioner for Patents  
P.O. Box 1450  
Alexandria, Virginia 22313-1450AGENDA FOR TELEPHONE INTERVIEW

Sir:

Applicants propose the following agenda for a telephone interview to be held on the date and time indicated in the Applicant-Initiated Examiner Interview Request, submitted concurrently herewith.

1. **Discuss claim amendments.** Applicants propose amending claim 1 as indicated below. If agreement is reached on the allowability of the proposed amendment, then Applicants will amend the other independent claims similarly.

- **Clarification of object.** Claim 1 may be amended to state that the virtual switch object "is an instantiation of a class." This feature distinguishes from Elliott because the "system" in FIG. 4A is not a "virtual switch object." A system is a collection of network elements used to perform a particular function whereas a virtual switch object is an instantiation of a programmatic class.
- Claim 1 also may be amended to incorporate claim 7 to clarify that "the virtual switch object comprises programmatic objects representing the media gateway controller, the one or more media gateways, and associations between the one or more media gateways and the media gateway controller."

Seq. No. 4664

1

Docket No. 50325-0604

2. **Discuss disclosure of Elliott and the claimed “virtual switch object.”**
- The independent claims recite a “virtual switch object,” but the Office Actions omit the term “object” in applying the Elliott reference. Thus, the Office Actions apply Elliott to something other than what is actually claimed. The Office Actions correlate a “virtual switch” to a “system” in FIG. 4A of Elliott, but nothing in Elliott corresponds to the claimed “virtual switch object.”
  - No part of the system of FIG. 4A receives user input that specifies a configuration operation and one or more parameter values, as recited in claim 1, second step.
  - Claim 1 recites “automatically issuing one or more configuration instructions to both the media gateway controller and the media gateway, resulting in configuring both the media gateway controller and the media gateway as specified in the user input.” The Second Office Action cited Figures 4F-4I of Elliott for this step, and contends that the claimed “media gateway controller” is the “soft switch” of FIG. 4A. However the figures of Elliott cited in the Second Office Action fail to teach that a “media gateway” is configured “as specified in the user input.” Nothing in Figures 4F-4I of Elliott, as cited in the Second Office Action, and the accompanying text refer to anything relating to configuring a media gateway based on automatically issued configuration instructions.

(continued)

Docket No. 50325-0604

PROPOSED CLAIM AMENDMENT

1. (Currently amended) A method of managing packet voice networks using a virtual switch approach, the method comprising the computer-implemented steps of:  
creating and storing a virtual switch object, wherein the virtual switch object is an instantiation of a class and represents a virtual switch, in a packet-switched voice network, having a media gateway controller and one or more associated media gateways, wherein the virtual switch object comprises programmatic objects representing the media gateway controller, the one or more media gateways, and associations between the one or more media gateways and the media gateway controller;  
receiving user input that specifies a configuration operation on the virtual switch and one or more parameter values; and  
automatically issuing one or more configuration instructions to both the media gateway controller and the media gateway, resulting in configuring both the media gateway controller and the media gateway as specified in the user input.
